

Artificial Engine Optimization (AEO)

Answer optimization, prompt monitoring, and analytics

Equisolve’s AEO empowers IR teams by positioning their IR website as the definitive source of truth for company information, providing trusted citations, while enabling them to uncover investor intent through sophisticated analytics. This allows teams to gain a deeper understanding of the audiences engaging with their site, both human and AI-driven.

3 Pillars of AEO: *all in the code*

- **Semantic Code:**

It helps search engines, AI, and assistive technology read your content more accurately

- **Schema Markup:**

Schema is like giving search engines and AI a clear, labeled menu of what’s on each page

- **LLMS.txt:**

LLMS.txt is a short “instruction sheet” for AI models that tells them what to use and how to cite your website, and which pages are best to include in AI answers.

AIO Prompt Monitoring:

Know exactly how AI talks about your company

- Runs a structured library of investor-relevant prompts/questions to ensure citations go back to your website
- Runs prompts across ChatGPT, Perplexity, Claude, Gemini, and Grok
- Prompts can be added and can be customized to be unique to each organization
- Tracks brand mentions, citation accuracy, and AEO score over time
- Split scores between prompt and citation accuracy, and code structure

Recent Prompt Results

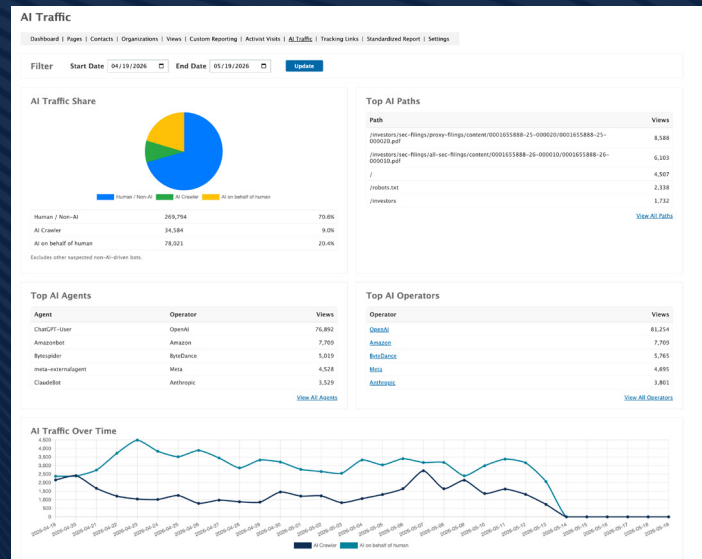

Last 30 AI answers about your company. Click any row to read the full response and see the links the AI cited. Link availability varies by AI model – see details.

Date	Model	Prompt	Mentioned	Site mentioned	Score
